HELP US MAKE THE EYE SUSTAINABLE!

Tips & tricks for sustainable behaviour at the EYE

TRANSPORT AND MOBILITY

Reduce your CO₂ emissions when travelling to/from Strasbourg

Transportation is responsible for 15 to 20% of worldwide CO₂ emissions.

In Europe, 45 % of air travel relates to a distance of 500 km or less. Source: International Young Naturefriends (IYNF)

A participant coming from Barcelona to the EYE (1800 km return) will produce:

4	Airplane	426 kg of CO₂ per person
	Car	85 kg of CO_2 per person (in a car of 4)
	National train	82 kg of CO ₂ per person
	Coach	40 kg of CO ₂ per person (in a full coach)
Q	Fast train	22 kg of CO ₂ per person

What you can do!

Calculate your carbon footprint and face the impact of your travel choice on the environment:

www.theconvergingworld.org/carbon_calculator

Choose sustainable transport when exploring Strasbourg:

Why not explore the city by foot, try local public transport or rent a self-service bike?

> http://urlz.fr/3fEE www.cts-strasbourg.eu/en/ www.velhop.strasbourg.eu/en/

Choose less emission intensive public transport or car-pooling

instead of flying to Strasbourg (at least for distance of less than 1000 km) you can find travel mates on the EYE event page:

www.facebook.com/events/164049063970173/ or contact the EYE Contact Point in your country:

Tips & tricks for sustainable behaviour at the EYE

WASTE

Paper

The paper industry has an enormous impact on the environment. Each year around 4 billion trees are cut down for paper.

Source: International Young Naturefriends (IYNF)

What you can do!

Limit print to a minimum and recycle paper.

Use digital supports instead of printing.
The programme and practical info
will be available on the EYE app. Free Wi-Fi
will be available at the event.

2

Print on recycled paper and with eco-friendly inks.

Recycle paper before, during and after the EYE.

There will be designated recycling bins at the event

Plastic

When you buy bottled water, as soon as you drink it, the plastic bottle becomes waste. Unless it is recycled, it can rot in a landfill for hundreds of years.

Between 50 and 80% of plastic PET bottles used in the EU in 2011 were not recycled. Source: International Young Naturefriends (IYNF)

Globally, bottled water generates 1.5 million tons of plastic waste each year.

It represents the equivalent of the weight of 150 Eiffel towers. Source: International Young Naturefriends (IYNF)

What you can do!

Buy a reusable water bottle! There will be free drinking water points at the event. Quit using plastic bottles!

Recycling

Every year we fill enough garbage trucks to form a line that could stretch from the earth, halfway to the moon. Source: International Young Naturefriends (IYNF)

MORE THAN
4.8 MILLION
METRIC TONS

Decay times of...

6 MONTHS

500 YEARS

500 YEARS

Power a 60-watt light Power a computer Power a television bulb for 3 hours for 25 minutes for 3 hours

The amount of energy saved by recycling...

What you can do!

The best way to save energy is to reduce consumption – think about what you are using and if you can avoid creating waste.

For the waste you can't avoid, make sure you recycle as much as possible.

Pay attention to recycle bins at the event and sort your waste properly

Tips & tricks for sustainable behaviour at the EYE

FOOD CONSUMPTION AND FOOD WASTE

Producing, distributing, storing and cooking food has an enormous impact on the environment.

- Animal agriculture is responsible for 18% of worldwide greenhouse gas emissions,
- a bigger share than of all the transport combined. Source: UN Food and Agriculture Organization
- Producing 1 kg of beef emits 13 times as much CO₂ as producing 1 kg of plant protein (beans, lentils, soya). Source: Robbins, John. Diet for a New America

CO2

LET'S **SAVE**

Intensive breeding leads to deforestation, environmental degradation and water scarcity.

- 55 million of hectares of rainforest have been destroyed so far to feed livestock. That represents the equivalent of 125 times the total size of the European Union. Source: "Amazon Destruction." Monga Bay.
- One third of the planet's fresh water is used by the meat and dairy industry. Source: International Young Naturefriends (IYNF)

The staggering scale of food waste in Europe results in huge waste of energy, resource and money.

- On average 179 kg of food per person is wasted each year in the European Union. Source: International Young Naturefriends (IYNF)
- Food waste causes enormous amounts of pollution due to decomposition process. Rotting food creates methane, which is 23 times as potent as CO₂. Source: UN Environment Programme

Buy only what you can eat!

Privilege local and seasonal food!

- Support a short supply chain and cut down transport responsible for CO2 gas
- Enjoy freshness of seasonal products instead of "long-distance" fruit and vegetables
- Promote food culture and preserve diversity of local cuisines

Taste the difference of fair trade, organic food!

- It has less pesticide residue than conventional fruit and vegetables
- It works with nature rather than against it by promoting biodiversity
- prices for locally grown products

Want to eat out in Strasbourg?

Check out addresses on ECOmaps and discover the most eco-friendly places the city has to offer: http://ecomaps.eu/en/map/strasbourg/

Try out a meat-free diet for 2 days and prepare to be surprised: It is tasty and healthy!

The food area in the YO!Village will offer a diversity of alternatives to industrial, meat-based cuisine.
